PROFESSIONAL EXPERIENCE:

IONIC & ANGULAR DEVELOPER

IUDU
March 2021- Present day

As a front-end developer I participate of a team that gives service to the different tribes of the company.
I've been developing web and mobile applications with Ionic and Angular for Android and IOS.
Languages:
- Javascript, Typescript.
Frameworks:
- Ionic & Angular
Tasks:
- Development and implementation of different features for the application.
- Mantaining the application, debugging and fixing.
- Creation of services to communicate with the back-end.
- Full component development for genear usage on the application.
- Coordination with back-end developers for features and services implementations.
- Full management of Angular and Ionic CLI.
- Development with Cordova & Capacitor.
- Task estimations and feature proposition.

ANGULAR DEVELOPER

DLN Construcciones (Freelance)
September 2021- Present day

As a front-end developer I did the whole development of the web app. The Owner was looking to add some functionalities to his app cause he only had a landing page, so i proposed him a development with Angular and Node JS. I focus on the Angular part and work side by side with another backend developer.
Languages:
- Typescript, HTML, CSS.
Frameworks:
- Angular

The core objective of the development was to redesign the web page without loosing the style it already had, cause the owner liked it. On the other hand we added a lot of CRUD functionalities for him to administrate the app. We also included auth functionalities, implemented JWTOKEN for managing the session of the user and a lot more!
